Reference Document/Plan

| Document/Plan to be Certified: | Monthly Environmental Monitoring & Audit Report for March 2022 (Revision 2) |
|--------------------------------|--|
| Date of Report: | 24 May 2022 |

Reference EP Condition

Environmental Permit Condition:

Condition 3.5

The Permit Holder shall submit 4 hard copies and 1 electronic copy of Monthly EM&A Reports for the construction stage of the Project to the Director, within 2 weeks after the end of the reporting month. The monthly EM&A Reports shall include an executive summary of all environmental audit results, together with actions taken in the event of non-compliance (exceedances) of the environmental quality performance limits (Action and Limit Levels), complaints received and emergency events relating to violation of environmental legislation (such as illegal dumping and landfilling). The submissions shall be certified by the ET Leader and verified by the IEC as having complied with the requirements as set out in the updated EM&A Manual before submission to the Director. Additional copies of the Monthly EM&A Reports shall be provided upon request by the Director.

ET Certification

I hereby certify that the above referenced document/plan complies with the above referenced condition of EP-519/2016

Attention: Mr. Vincent CHOW/ Mr. K.T. WO

Dear Sir,

Agreement No. CE 59/2017 (EP) Independent Environmental Checker for Tung Chung New Town Extension – Investigation Monthly Environmental Monitoring & Audit Report (Revision 2) for March 2022 for TCE

We refer to the Monthly Environmental Monitoring & Audit Report (Revision 2) for March 2022 for Tung Chung New Town Extension (East) (TCE) dated May 2022 and certified by the Environmental Team (ET) Leader of TCE on 24 May 2022. Please note the submission is hereby verified, in accordance with the requirement stipulated in Condition 3.5 of EP-519/2016.

Should you have any query, please feel free to contact the undersigned at 2608 7314 (<u>chuawo@binnies.com</u>) or our Edward Lau at 6848 5737 (<u>iec.tcnte@gmail.com</u> or <u>lauky@binnies.com</u>).

Yours faithfully, for and on behalf of BINNIES HONG KONG LIMITED

MANUEL CHUA INDEPENDENT ENVIRONMENTAL CHECKER

EXECUTIVE SUMMARY

Tung Chung New Town Extension (TCNTE) is one of the major initiatives under the Government's multi-pronged approach to increase land supply to meet Hong Kong's medium- to long-term needs for housing, economic and social developments. The Environmental Impact Assessment (EIA) Report for TCNTE (Register No. AEIAR-196/2016) was approved on 8 April 2016 and the Environmental Permit (EP) No. EP-519/2016, covering the construction and operation of TCNTE, was granted on 9 August 2016. The EIA Report and EP cover both Tung Chung East (TCE) and Tung Chung West (TCW). ERM-Hong Kong, Limited (ERM) is commissioned to undertake the role of Environmental Team (ET) for the construction and operation of TCE Project ("the Project") in accordance with the requirements specified in the EP, Updated Environmental Monitoring and Audit (EM&A) Manual, EIA Report of the TCNTE project and other relevant statutory requirements.

The construction of the Contract No. NL/2017/03 - Tung Chung New Town Extension – Reclamation and Advance Works ("Contract 1") at TCE commenced on 9 July 2018.

The construction of the Contract No. NL/2020/02 - Tung Chung New Town Extension – Salt Water Supply System ("Contract 2") at TCE commenced on 4 September 2021.

The construction of the Contract No. NL/2020/03 - Tung Chung New Town Extension – Major Infrastructure Works in Tung Chung East ("Contract 3") at TCE commenced on 5 November 2021.

The construction of the Contract No. NL/2020/07 - Tung Chung New Town Extension – Tai Ho Interchange ("Contract 7") at TCE commenced on 15 March 2022.

This is the Monthly EM&A report presenting the EM&A works carried out during the period from 1 to 31 March 2022 for the TCE Project in accordance with the Updated EM&A Manual.

A summary of monitoring and audit activities conducted in the reporting period is listed below:

| Air Quality Monitoring | 6 sessions |
|---------------------------------------|-------------|
| Noise Monitoring | 6 sessions |
| Water Quality Monitoring | 13 sessions |
| Preserved Plant Species Monitoring | 1 session |
| Transplanted Plant Species Monitoring | 5 session |

Environmental Site Inspection

| - | Contract 1 | 4 sessions (1) |
|---|------------|----------------|
| - | Contract 2 | 5 sessions |
| - | Contract 3 | 3 sessions (2) |
| - | Contract 7 | 5 sessions |

Environmental Management Meeting

| - | Contract 1 | 1 session |
|---|------------|-----------|
| - | Contract 2 | 1 session |
| - | Contract 3 | 1 session |
| - | Contract 7 | 1 session |

Environmental auditing works, including weekly site inspections of construction works conducted by the ET, audit of works vessels, audit of implementation of Dolphin Watching Plan, Works Vessel Travel Route Plan, Silt Curtain Deployment Plan, Spill Response, Waste Management Plan and Detailed Preservation and/or Translocation of Plant Species of Conservation Importance were conducted in the reporting period. Based on the audit results and the observation for the reporting period, environmental pollution control and mitigation measures for the Project were properly implemented.

Breaches of Action and Limit Levels for Air Quality

No exceedance of Action and Limit Levels was recorded for construction air quality monitoring in the reporting period.

Breaches of Action and Limit Levels for Noise

No exceedance of Limit Levels was recorded for construction noise monitoring in the reporting period. However, two (2) Action Level were triggered from two (2) environmental complaints related to noise nuisance in the reporting period. Investigations were conducted for the exceedances in accordance with the Event and Action Plan.

Breaches of Action and Limit Levels for Water Quality

No exceedance of Action and Limit Levels was recorded for water quality impact monitoring in the reporting period.

(1) Site inspection on 3 March 2022 for Contract 1 was cancelled due to COVID-19 pandemic.(2) Site inspection on 4 March 2022 for Contract 3 was cancelled due to COVID-19 pandemic.

Soft Shore Ecological Monitoring

No impact soft shore ecological monitoring at Tung Chung Bay and Tai Ho Wan was scheduled during the reporting period.⁽¹⁾

Environmental Complaints, Non-compliance & Summons

There was no notification of summons or prosecution recorded in the reporting period.

Three (3) environmental complaints related to Contract 3 were received in the reporting period. Investigations were conducted for the environmental complaints in accordance with the complaint handling process as stated in the Complaint Management Plan.

Reporting Change

There was no reporting change in the reporting period.

Key Issues For The Coming Month

Potential environmental impacts arising from the upcoming construction activities in the next reporting period of April 2022 are mainly associated with dust emission, noise from barge and plant operation during normal working hours and restricted hours, elevation in SS due to marine filling works, disturbance to Chinese White Dolphin (CWD) during marine works, handling and storage of C&D materials generated from construction activities, efficiency of wastewater and drainage management and tree protection. The ET will keep track on the construction works to confirm compliance of environmental requirements and the proper implementation of all necessary mitigation measures. The ET will also recommend to the Contractor about the environmental toolbox topics on the abovementioned key issues for the coming month.

(1) Impact soft shore ecological monitoring at Tung Chung Bay and Tai Ho Wan was postponed to April 2022 due to COVID-19 pandemic.

1 INTRODUCTION

1.1 BACKGROUND

Tung Chung New Town Extension (TCNTE) is one of the major initiatives under the Government's multi-pronged approach to increase land supply to meet Hong Kong's medium- to long-term needs for housing, economic and social developments. The Environmental Impact Assessment (EIA) Report for TCNTE (Register No. AEIAR-196/2016) was approved on 8 April 2016 and the Environmental Permit (EP) No. EP-519/2016, covering the construction and operation of TCNTE, was granted on 9 August 2016. The EIA Report and EP cover both Tung Chung East (TCE) and Tung Chung West (TCW).

ERM-Hong Kong, Limited (ERM) is commissioned to undertake the role of Environmental Team (ET) for the construction and operation of TCE Project ("the Project") in accordance with the requirements specified in the EP, Updated Environmental Monitoring and Audit (EM&A) Manual ⁽¹⁾, EIA Report of the TCNTE project ⁽²⁾ and other relevant statutory requirements.

The TCNTE comprises the following elements:

- (a) TCE Project
- 1. Reclamation of the seabed by a non-dredged method at TCE to form a total of about 130 hectares of land;
- 2. Construction of about 4.9 kilometers of seawalls, with an eco-shoreline, three drainage box culvert outfalls, three circulation drains and a seawater intake at TCE;
- 3. Provision of infrastructure for Tung Chung Area 58, including construction of a single two-lane road with a footpath and the associated utility works;
- 4. Construction of proposed open space;
- Construction of roads, footpaths, cycle tracks and the associated junction / road improvement works;
- 6. Engineering infrastructure works covering drainage, sewerage, waterworks (including a fresh water service reservoir, a salt water service reservoir and a salt water pumping station), common utility tunnels and landscaping works; and

ERM (2018a). Updated Environmental Monitoring and Audit Manual for Tung Chung New Town Extension. Deposited to EPD under EP-519/2016

⁽²⁾ Arup (2015). Environmental Impact Assessment Report for Tung Chung New Town Extension. Deposited to EPD under Register No. AEIAR-196/2016

- 7. Implementation of environmental mitigation measures and environmental monitoring and audit programme for the works.
- (b) TCW Project
- 1. Site formation works at TCW;
- 2. Construction of proposed open space;
- 3. Construction of the River Park including a visitor centre at TCW; and
- 4. Construction of sustainable urban drainage systems at TCW.

The locations of Contracts 1, 2, 3 and 7 are shown in *Figure 1.1* to 1.4. The construction and the reclamation related marine works of Contract 1 commenced on 9 and 13 July 2018, respectively. The construction of Contracts 2, 3 and 7 commenced on 4 September 2021, 5 November 2021 and 15 March 2022, respectively.

1.2 Scope of the EM&A Report

This is the Monthly EM&A Report for the TCE Project which summarises the key findings of the EM&A programme during the reporting period from 1 to 31 March 2022 for the construction works.

1.3 ORGANIZATION STRUCTURE

The organization structure of the Project is shown in *Annex A*. The key personnel contact names and contact details are summarized in *Table 1.1* below.

Contract No. NL/2020/03 - Tung Chung New Town Extension – Major Infrastructure Works in Tung Chung East (Contract 3)

Land-based Works

- Installation of sheetpile at
 Portion 104
 Installation of sheetpile at
- Installation of sheetpile at CUT no.1
- Site formation works/ drainage works and construction of temporary transformer building at WA6/WA9
- Erection of PM office at WA9
- Installation of sheetpile at Portion 8 and 8A
- Drainage/ sewerage works at Portion 12
- Setting up of TTA for watermain at Man Tung Road

- Dust emission
- Handling and storage of C&D materials generated from construction activities
- Noise from plant operation
- Emission of dark smoke from PMEs
- Efficiency of wastewater and drainage management

Good site practices

•

- Regular water spraying on stockpiles, unpaved haul road and land filling area
- Provide tarpaulin sheets coverage on stockpiles
- Sorting and reuse of C&D materials as far as practicable
- Use of QPME and noise barrier/acoustic mat
- Regular maintenance of PMEs
- Implementation of wastewater and drainage management

The environmental mitigation implementation schedule is presented in *Annex B*.

1.5 SUMMARY OF EM&A PROGRAMME REQUIREMENTS

The status for all environmental aspects are presented in *Table 1.3*. The EM&A requirements remained unchanged during the reporting period.

Table 1.3Summary of Status for the Environmental Aspects under the Updated EM&AManual

| De use est sur | 61-1 |
|--|--|
| Parameters | Status |
| Air Quality | |
| Baseline Monitoring | The results of baseline air quality monitoring for TCE were reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4 |
| Impact Monitoring | On-going for TCE, monitoring conducted three times every six days |
| Noise | |
| Baseline Monitoring | The results of baseline noise monitoring for TCE were reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4 |
| Impact Monitoring | On-going for TCE, monitoring conducted once per week |
| Impact Monitoring for Road Traffic Noise during Operational Phase | To be conducted during operational phase |
| Fixed Noise Commissioning Test | To be implemented by the Contractor before operation of TCNTE |

| Parameters | Status |
|---|--|
| Baseline Monitoring | The results of baseline water quality monitoring for TCE were reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4 |
| Impact Monitoring | On-going for TCE, monitoring conducted three times per week |
| Waste Management Waste Monitoring | On-going |
| Land Contamination Contamination Assessment Plan (CAP), Remediation Action Plan (RAP) and Remediation Report (RR) | To be conducted under TCW. Refer to the EM&A Reports of TCW. |
| Ecology Monitoring for Compensation Woodland | To be conducted when compensation woodland are planted |
| Monitoring for Emergent Plant inside the future River Park | To be conducted under TCW. Refer to the EM&A Reports of TCW. |
| Monitoring for Translocated Amphibians of Conservation Importance | To be conducted under TCW. Refer to the EM&A Reports of TCW. |
| Monitoring for Preserved/Transplanted Plant Species of Conservation Importance Monitoring for Tung Chung Stream | On-going, for transplanted plant species, monitoring conducted once per week for the first three months; for preserved plant species, monitoring conducted once per month To be conducted under TCW. Refer to the EM&A Reports |
| EIS and Wong Lung Hang EIS | of TCW. Monitoring for Wong Lung Hang was not required and the proposal was accepted by EPD on 2 September 2021 |
| Eco-shoreline Monitoring | To be conducted when eco-shoreline at TCE PDA and Road P1 is built |
| Tung Chung Bay and Tai Ho Wan Baseline Monitoring | The results of baseline soft shore ecological monitoring at Tung Chung Bay and Tai Ho Wan were reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4 |
| Tung Chung Bay and Tai Ho Wan Impact Monitoring | On-going for TCE, monitoring conducted quarterly |
| Landscape and Visual Baseline Monitoring | The results of baseline landscape and visual monitoring were reported in Baseline Monitoring Report and submitted to EPD under EP Condition 3.4 |
| Site Environmental Audit Regular Site Inspection | On-going |
| Dolphin Watching Plan implementation measures | Under implementation by the Contractor of Contract 1 |

| Parameters | Status |
|---|--|
| Works Vessel Travel Route Plan implementation measures | Under implementation by the Contractor of Contract 1 |
| Silt Curtain Deployment Plan implementation measures | Under implementation by the Contractor of Contract 1 |
| Spill Response Plan implementation measures | Under implementation by the Contractor of Contract 1 |
| Waste Management Plan implementation measures | Under implementation by the Contractor of Contract 1 |
| Complaint Hotline and Email Channel | Under implementation by the Contractor of Contract 1. The 24-hour complaint hotline/email channel under Contracts 2, 3, and 7 are subjected for approval |
| Environmental Log Book | On-going |

Taking into account the construction works, impact monitoring of air quality, noise, water quality and waste management were carried out in the reporting period. The monitoring schedule of air quality, noise and water quality monitoring are provided in *Annex E2*, *Annex F2* and *Annex G2*, respectively.

The EM&A programme also involved environmental site inspections and related auditing conducted by the ET for checking the implementation of the required environmental mitigation measures recommended in the approved EIA Report and relevant EP submissions, including Dolphin Watching Plan, Works Vessel Travel Route Plan, Silt Curtain Deployment Plan, Spill Response Plan and Waste Management Plan.

To promote the environmental awareness and enhance the environmental performance of the contractors, environmental trainings and regular environmental management meetings were conducted during the reporting period, which are summarized as below:

- Four (4) environmental management committee meetings were held with the Contractors of Contract 1 and 7 and ER, ET, IEC and CEDD on 25 and 8 March 2022, respectively, and Contractors of Contract 2 and 3 on 16 March 2022;
- Environmental toolbox trainings on nuisance to residence (light pollution/sudden noise / dusty work), site hygiene, wastewater handling, discharge and treatment facilities, works vessel travel route plan, handling and storage of chemicals, construction noise permit on 2, 4, 11, 16, 25 and 30 March 2022 were conducted for Contract 1;
- Environmental toolbox trainings on site plant and machinery on 3, 18 and 24 March 2022 were conducted for Contract 2;
- Environmental toolbox trainings on paving, site clearance, construction noise and suppression, environmental abatement facilities, chemical waste management, dust control and air pollution abatement measures

on 1, 8, 17, 22, 24, 29 and 31 March 2022 were conducted for Contract 3;

• Environmental toolbox trainings on proper storage & disposal of general refuse, proper use of recycle bins, reuse, recycling & proper storage of C&D material and precautions after long holiday on 2, 16, 23 and 30 March 2022 were conducted for Contract 7.

1.6 STATUS OF STATUTORY ENVIRONMENTAL COMPLIANCE WITH THE ENVIRONMENTAL PERMIT

The status of statutory environmental compliance with the EP conditions under the EIAO, submission status under the EP and implementation status of mitigation measures are presented in *Annex C*.

1.7 STATUS OF OTHER STATUTORY ENVIRONMENTAL REQUIREMENTS

The environmental licenses and permits, including environmental permit, waste discharge license, registration as chemical waste producer and construction noise permit, which were valid in the reporting period are presented in *Annex D*. No non-compliance with environmental statutory requirements was recorded.

EM&A RESULTS FOR TUNG CHUNG EAST

The EM&A programme for the Project required environmental monitoring for air quality, noise, water quality and marine ecology as well as environmental site inspections for air quality, noise, water quality, waste management, marine ecology and landscape and visual impacts. The EM&A requirements and related findings for each component are summarized in the following sections.

2.1 AIR QUALITY

2

2.1.1 Monitoring Requirements and Equipment

According to the Updated EM&A Manual of the Project, impact air quality monitoring in terms of 1-hour Total Suspended Particulate (TSP) was conducted three (3) times every six (6) days when the highest dust impact was expected. The Action and Limit Levels of the air quality monitoring is provided in *Table 2.1* below.

Table 2.1Action and Limit Levels for 1-hour TSP

| Location | Action Level, µg/m ³ | Limit Level, µg/m ³ |
|---|---------------------------------|---------------------------------------|
| Monitoring station for Tung Chung East | 279 | 500 |

Portable direct reading dust meters were used to measure 1-hour TSP levels in undertaking the air quality monitoring for the Project. The proposed use of portable direct reading dust meters was submitted to IEC and obtained agreement from the IEC as stated in Section 5.5 of the Updated EM&A Manual. With the use of direct reading dust meter, it can allow prompt and direct results for the EM&A reporting and the implementation of the event and action plan. The portable direct reading dust meter would be calibrated every year against High Volume Sampler (HVS) to check the validity and accuracy of the results measured by direct reading method.

The monitoring location and equipment used in the impact air quality monitoring programme are summarized in *Table 2.2* and illustrated in *Figure 2.1*. Copies of the calibration certificates for the equipment are presented in *Annex E1*, which showed that the portable direct reading dust meter is capable of providing comparable results with that provided by a HVS.

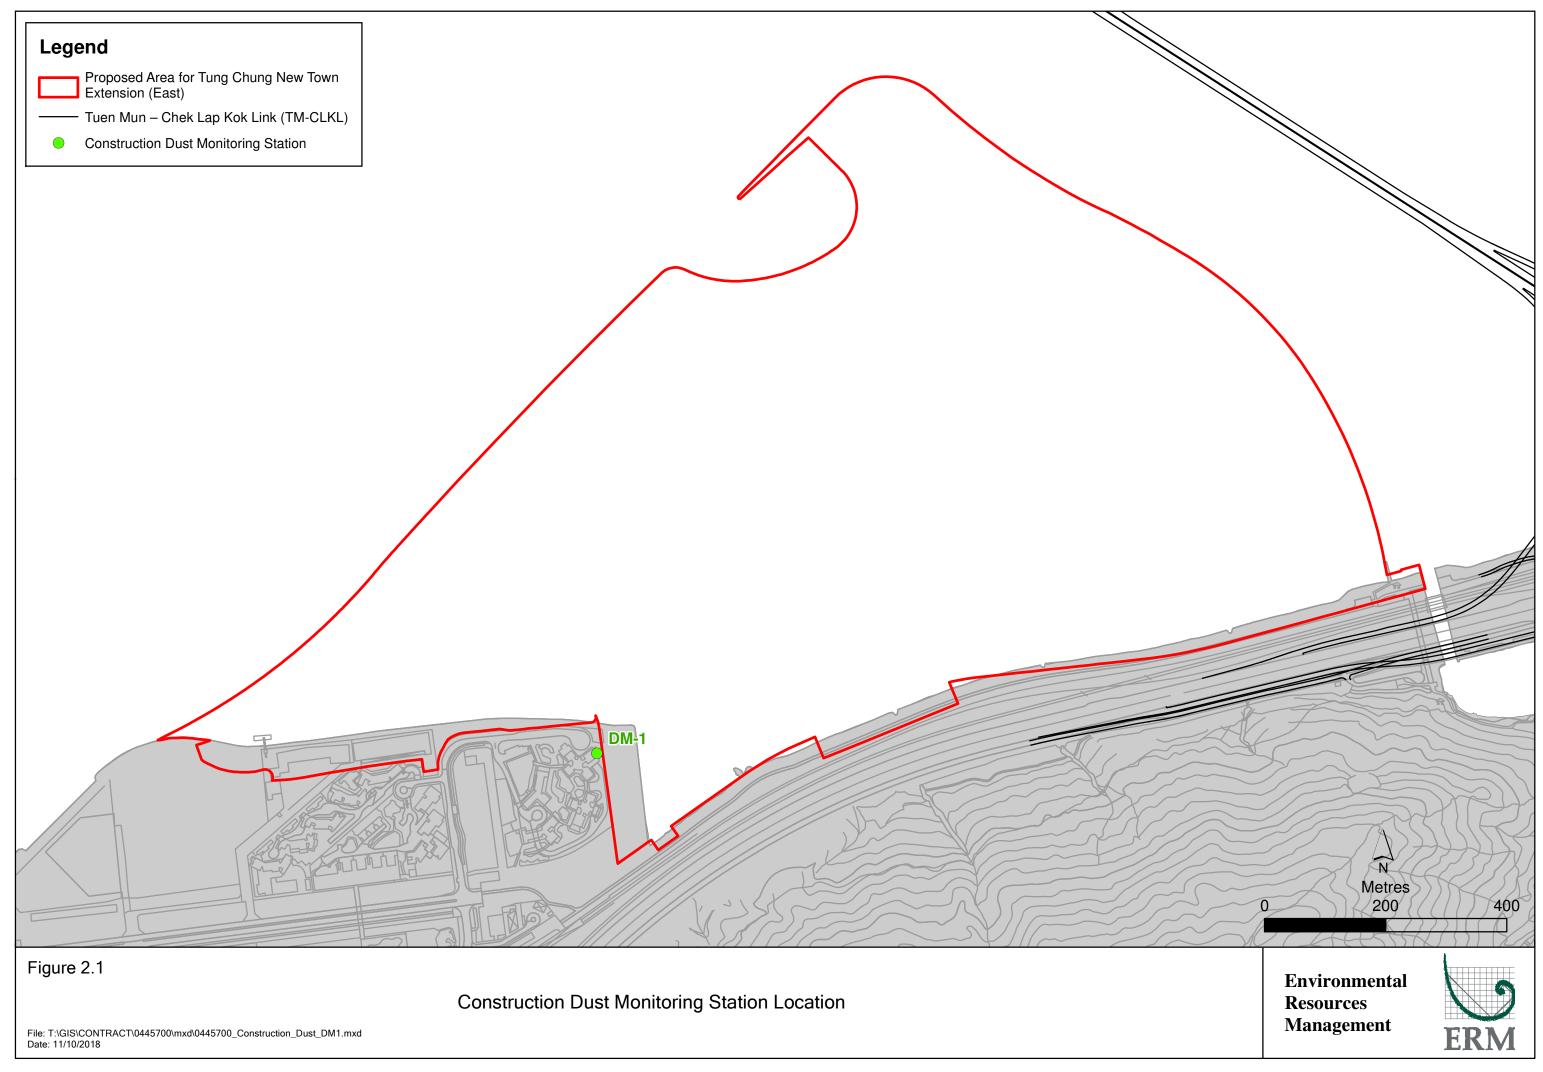

Table 2.2Air Quality Monitoring Details

| Monitoring Station | Location | Parameter | Frequency and Duration | Monitoring Dates | Equipment |
|-----------------------|------------|------------|---------------------------|---------------------|------------|
| DM-1 | Tung Chung | 1-hour TSP | Three times | 1, 7, 12, 18, 24 | 1-hour TSP |
| | Area 56 - | | per six days | and 30 March | Dust Meter |
| | Ying Tung | | during the | 2022 | SIBATA LD- |
| | Estate | | construction | | 3B (S/N: |
| | | | period of the | | 276017) |
| | | | Project | | |

Remark:

It should be noted that impact monitoring at other construction dust monitoring locations at TCE as stated in the Updated EM&A Manual will commence after the flat intake (for Monitoring Stations DM-2, DM-3 and DM-4).

2.1.2 Monitoring Schedule for the Reporting Month

The schedule for air quality monitoring during the reporting period is provided in *Annex E2*.

2.1.3 Results and Observations

The monitoring results for 1-hour TSP are summarized in *Table 2.3*. The monitoring data and the graphical presentation are provided in *Annex E3*.

Table 2.3Summary of 1-hour TSP Monitoring Results in the Reporting Period

| Monitoring Station | Average (µg/m³) | Range (µg/m ³) | Action Level (μg/m³) | Limit Level (µg/m³) |
|-----------------------|-----------------|----------------------------|-------------------------|------------------------|
| DM-1 | 41 | 22-64 | 279 | 500 |

Major dust sources in the reporting period included haul road traffic, unloading of sand/fill material and filling works under the Project.

No exceedance of Action and Limit Levels was recorded for construction air quality monitoring in the reporting period. No action was thus required to be undertaken in accordance with the Event and Action Plan presented in *Annex E4*.

2.2 NOISE MONITORING

2.2.1 Monitoring Requirements and Equipment

According to the Updated EM&A Manual of the Project, impact noise monitoring was conducted once per week during the construction phase of the Project. The Action and Limit Level for construction noise of the Project is provided in *Table 2.4* below.

Table 2.4Action and Limit Levels for Construction Noise

| Time Period | Action Level | Limit Level | |
|-----------------------------|-----------------------|-------------|--|
| 0700 - 1900 hours on normal | When one documented | 75 dB(A) * | |
| weekdays | complaint is received | 75 dB(A) | |

Notes:

Limit level is exceeded when $L_{eq} \ge 75$ dB(A). If works are to be carried out during restricted hours, the conditions stipulated in the construction noise permit issued by the Noise Control Authority have to be followed.

* Reduce to 70 dB (A) for schools and 65 dB (A) during school examination periods.

Noise monitoring was performed using sound level meter at the designated monitoring stations NMS-CA-1A ⁽¹⁾ ⁽²⁾ and NMS-CA-4 (*Figure 2.2; Table 2.5*) in accordance with the requirements stipulated in the Updated EM&A Manual. Acoustic calibrator was deployed to check the sound level meters at a known sound pressure level. Details of the deployed equipment are provided in *Table 2.5*. Copies of the calibration certificates for the equipment are presented in *Annex F1*.

 Impact monitoring at monitoring station NMS-CA-1A commenced on 19 September 2018 in view of the close vicinity of the construction works near the residential area at Century Link.

(2) Due to land handover issue, NMS-CA-1A was relocated to Ying Hong Road which is located 60m away from the original location. Proposal on the relocation of NMS-CA-1A was approved by IEC on 23 November 2018. Noise monitoring at the relocated location commenced since 24 November 2018.

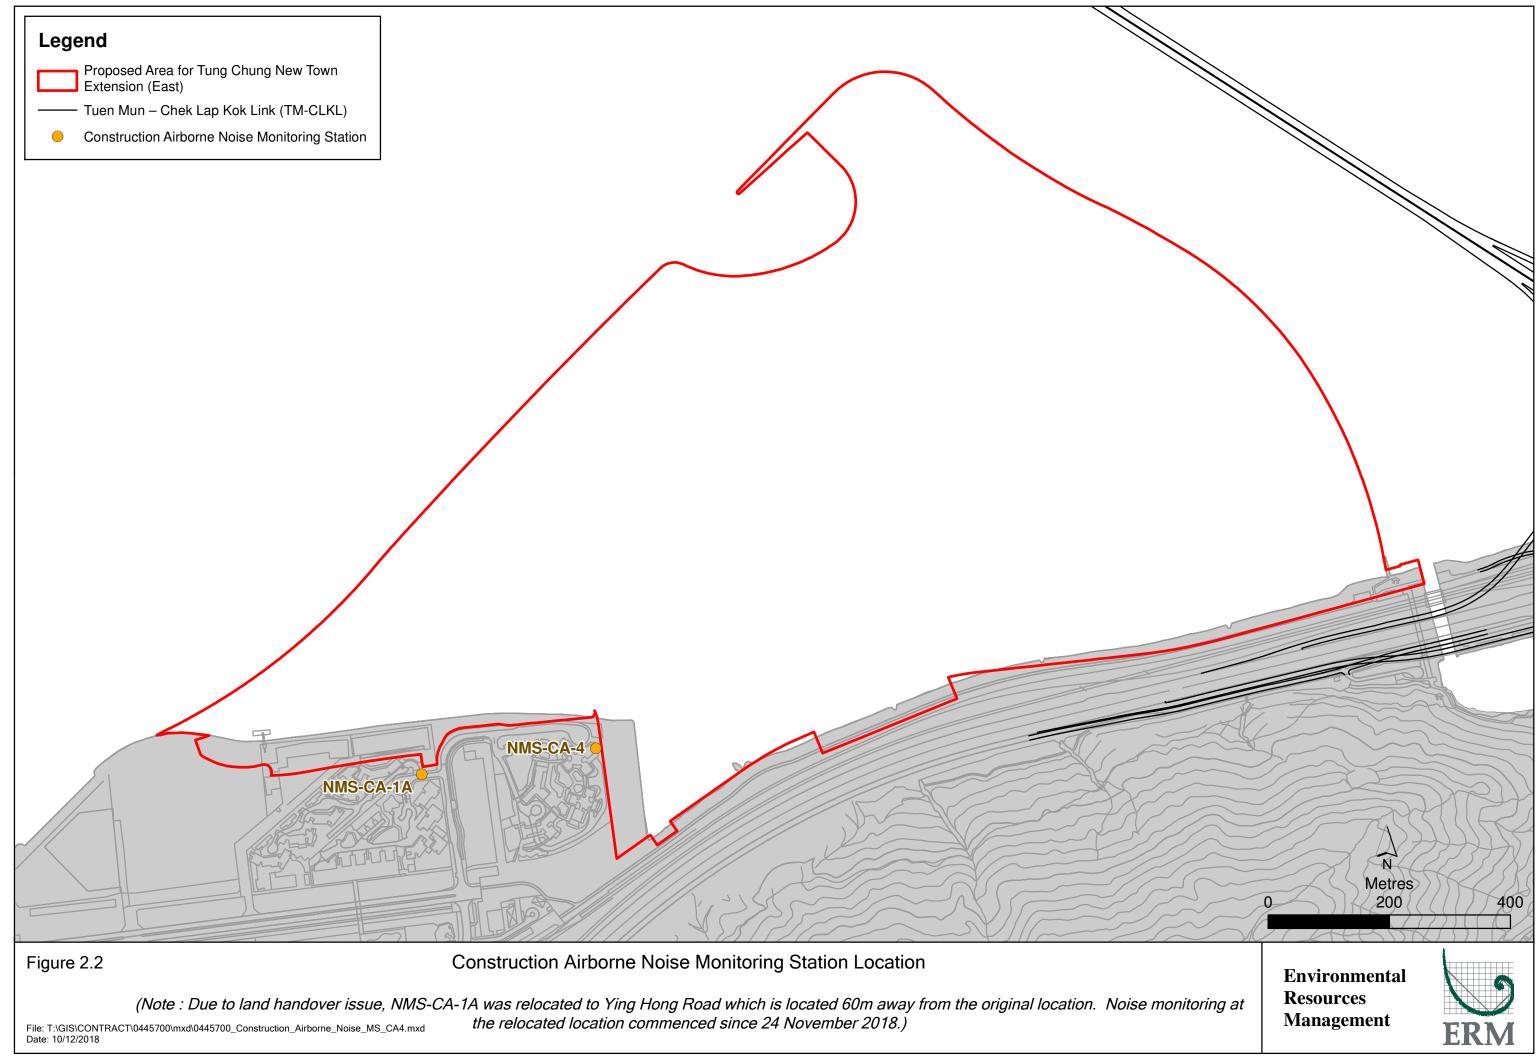

Table 2.5Noise Monitoring Details

| Monitoring Station ^(a) | Location | Parameter | Frequency and Duration | Monitoring Dates | Equipment |
|--------------------------------------|--|-----------|---|--|---|
| NMS-CA-1A (b) | Tung Chung | 5 | Once per week for 30 mins during the construction period of the Project | 1, 7, 12, 18, 24 and 30 March 2022 | Sound Level Meter: Rion NL-52 (S/N: 00331805) Acoustic Calibrator: LARSON |
| NMS-CA-4 | Residential premise in the reclamation area next to Tung Chung East – Ying Tung Estate | recorded. | | | DAVIS CAL200 (S/N: 11333) |

Remarks:

- (a) It should be noted that impact monitoring at other construction noise monitoring locations at TCE as stated in the Updated EM&A Manual will commence after the flat intake of residential premise in TCE (for Monitoring Station NMS-CA-1) and operation of schools (for Monitoring Stations NMS-CA-2 and NMS-CA-3).
- (b) Impact monitoring at monitoring station NMS-CA-1A commenced on 19 September 2018 in view of the close vicinity of the construction works near the residential area at Century Link.
- (c) Due to land handover issue, NMS-CA-1A was relocated to Ying Hong Road which is located 60m away from the original location. Proposal on the relocation of NMS-CA-1A was approved by IEC on 23 November 2018. Noise monitoring at the relocated location commenced since 24 November 2018.

2.2.2 Monitoring Schedule for the Reporting Month

The schedule for noise monitoring during the reporting period is provided in *Annex F2*.

2.2.3 *Results and Observations*

Results for noise monitoring are summarized in *Table 2.6*. The monitoring data and the graphical presentation are provided in *Annex F3*.

Table 2.6Summary of Construction Noise Monitoring Results in the Reporting Period

| Monitoring Station | Average , dB(A), L _{eq (30mins)} | Range, dB(A), L _{eq (30mins)} | Limit Level, dB(A), L _{eq (30mins)} |
|--------------------|--|---|---|
| NMS-CA-1A | 66.1 | 63.9-68.5 | 75 |
| NMS-CA-4 | 63.2 | 61.4-65.8 | 75 |

Major noise sources during the noise monitoring included noise from plant operation, craning, piling, haul road traffic, nearby traffic and aircraft as well as nearby construction sites. No Limit Level exceedance was recorded for construction noise monitoring in the reporting period. However, two (2) Action Levels were triggered from two (2) environmental complaints related to noise nuisance in the reporting period.

2.3 WATER QUALITY MONITORING

2.3.1 Monitoring Requirements and Equipment

Impact water quality monitoring was carried out to ensure that any deterioration of water quality was detected, and that timely action was taken to rectify the situation. Impact water quality monitoring was undertaken three days per week since the commencement of marine works during the reporting period in accordance with the Updated EM&A Manual. Each impact water quality monitoring was scheduled such that the interval between two impact water quality monitoring was more than 36 hours to record representative water quality data throughout the week during the marine works.

Two (2) replicate *in-situ* measurements and samples were collected at each monitored water depth of each designated monitoring stations. Dissolved Oxygen (DO), pH value, salinity, temperature and turbidity were measured *in-situ* whereas the level of suspended solids (SS) were determined by ALS Technichem (HK) Pty Ltd which is a HOKLAS accredited laboratory.

The Action and Limit Levels of the water quality monitoring are provided in *Table 2.7*.

| Parameters | Action Level | Limit Level |
|---------------------------------------|---|--|
| DO in mg/L | Surface and Middle | Surface and Middle |
| (Surface, Middle & Bottom) | 5.9 mg/L ^[1] | 4 mg/L ^[1] |
| | Bottom | Bottom |
| | 5.6 mg/L | 2 mg/L |
| SS in mg/L (Depth-averaged) | station at the same tide of the | 23.5 mg/L or 130% of upstream control station at the same tide of the same day, whichever is higher. ^[2] |
| Turbidity in NTU (Depth- averaged) | or 120% of upstream control station at the same tide of the | 23.5 NTU or 130% of upstream control station at the same tide of the same day, whichever is higher. [2] |

Table 2.7Action and Limit Levels for Water Quality

Notes:

(1) For DO, non-compliance occurs when monitoring results is lower than the limits.

(2) For SS and Turbidity, non-compliance occurs when monitoring results is larger than the limits

The locations of the monitoring stations under the Project are shown in *Figure* 2.3 and *Table* 2.8.

Table 2.8Locations of Impact Water Quality Monitoring Stations and the
Corresponding Monitoring Requirements

| Monitoring Station | Description | Coor | dinates | Parameters ^(a) | Frequency | Monitoring Dates | Depth |
|-----------------------|--|------------|------------|---|--------------------------|--------------------------------|---|
| | | Easting | Northing | | | | |
| TCE-WQM1 | Near Airport Channel | 811838 | 817341 | • Dissolved Oxygen (DO) | Impact monitoring: | 2, 4, 7, 9, 11, 14, 16, 18, | 3 water depths: 1m |
| TCE-WQM2a | Marine Park 1 | 814439 | 819879 | (mg/L and % saturation) | 3 days per week, at | 21, 23, 25, 28 and 30 | below sea surface, mid- |
| TCE-WQM2b | Marine Park 2 | 814439 | 821905 | Temperature (°C) | mid-flood and mid-ebb | March 2022 | depth and 1m |
| TCE-WQM3A | Outlet of Tai Ho Wan | 814705 | 817859 | • Turbidity (NTU) | tides during the | | above seabed. If |
| TCE-WQM4 | HKBCF | 813344 | 818849 | • Salinity (ppt) | construction | | the water |
| TCE-C1 | Control | 804247 | 815620 | • pH | period of the | | depth is less |
| | Station - Outside Airport Channel | | | Water depth (m) Suspended Solid (SS) | Project | | than 3m, mid-depth sampling only. If |

| Quality System (measurement | 21G105356) |
| of DO, Temperature, | |
| Turbidity, Salinity and pH) | |

2.3.2 Monitoring Schedule for the Reporting Month

The schedule for water quality monitoring during the reporting period was provided in *Annex G2*.

2.3.3 Results and Observations

A total of 13 monitoring events for impact water quality monitoring were conducted at all designated monitoring stations during the reporting period. Impact water quality monitoring results and graphical presentations were provided in *Annex G3*.

No exceedance of Action and Limit Levels was recorded for water quality impact monitoring in the reporting period. No action was thus required to be undertaken in accordance with the Event and Action Plan presented in *Annex G4*.

2.4 PRESERVED/TRANSPLANTED PLANT SPECIES OF CONSERVATION IMPORTANCE MONITORING

Plant species of conservation importance, including three individuals of *Aquilaria sinensis* and 33 individuals of *Gmelina chinensis*, were identified within works areas for Contract 2. All individuals of *Aquilaria sinensis* and 31 individuals of *Gmelina chinensis* were recommended being preserved *in-situ* while two individuals of *Gmelina chinensis* (RT-07 and RT-08) were recommended being transplanted to the receptor site in accordance with the Detailed Preservation and/or Translocation Plan for Plant Species of Conservation Importance approved under Condition 2.21 of EP-519/2016. Initial tree survey was conducted in September 2021 under Contract No. NL/2020/02 before the commencement of construction works. According to the initial tree survey conducted, the *in-situ* preserved plant species of conservation importance of which one individual of *Aquilaria sinensis* and six individuals of *Gmelina chinensis* were found missing.

2.4.1 Preserved Plant Species of Conservation Importance

Monthly monitoring of the *in-situ* preserved plant species of conservation importance by the Qualified Personnel (QP) appointed under Contract 2 was implemented in the reporting period. Health condition was considered fair for the majority of the *in-situ* preserved plant species of conservation importance, of which two individuals of *Gmelina chinensis* could not be

monitored as a result of unsafe access to the locations, as recorded during the monitoring carried out on 24 March 2022.

Tree protection zones for the *in-situ* preserved plant species of conservation importance were demarcated. No injuries and/or damages to the individuals of the *in-situ* preserved plant species of conservation importance were reported by the QP since the previous monitoring events. Photographic record and tree schedule of the preserved plant species of conservation importance monitoring are provided in *Annex H1*.

2.4.2 Transplanted Plant Species of Conservation Importance

Site visit to the receptor site for the transplanted plant species of conservation importance was carried out on 20 January 2022 prior to the commencement of transplantation works for the transplanted plant species of conservation importance on 21 January 2022.

Four monitoring of the transplanted plant species of conservation importance events were implemented as part of the ET's regular site inspection on 2, 9⁽¹⁾, 16, 23 and 30 March 2022. Key observations during the monitoring events are summarized in Table 2.13. Photographic record of root pruning, transplantation, post-transplantation monitoring and the suitable receptor site location of the transplanted plant species of conservation importance monitoring are provided in *Annex H2*.

Organic mulching was applied to improve the preservation environment and the plant health on 11 March 2022. The transplanted plant species of conservation importance were watered daily to keep the soil moist except in days with heavy rainfall. The ET will continue to monitor the implementation of monitoring of *in-situ* preserved/ transplanted plant species of conservation importance.

2.5 SOFT SHORE ECOLOGICAL MONITORING

No impact soft shore ecological monitoring at Tung Chung Bay and Tai Ho Wan was scheduled during the reporting period. The impact soft shore ecological monitoring at Tung Chung Bay and Tai Ho Wan was postponed to April 2022 due to COVID-19 pandemic.

2.6 EM&A SITE INSPECTION

Site inspections were carried out on a weekly basis with the Contractor and ER to monitor the implementation of proper environmental pollution control and mitigation measures for air quality, noise, water quality, waste management, marine ecology, landscape and visual impacts and preservation

(1) Monitoring of *in-situ* preserved plant species of conservation importance for the week ending 12 March 2022 was carried out on 11 March 2022 with organic mulching application carried out on the same day.

and/or transplantation of plant species of conservation importance under the Project. In the reporting period, four (4) site inspections were carried out on 10, 17, 24 and 31 March 2022 for Contract 1⁽¹⁾, five (5) site inspections were carried out on 2, 9, 16, 23 and 30 March 2022 for Contract 2, three (3) site inspections were carried out on 11, 16 and 25 March 2022 for Contract 3⁽²⁾ and five (5) site inspections were carried out on 1, 8, 15, 22 and 29 March 2022 for Contract 7.

Key observations during the site inspections are summarized in *Table 2.10*.

Table 2.10Key Observations Identified during the Site Inspection in this Reporting
Month

| Contract No. | Inspection Date | Environmental Observations | Recommendations/ Remarks | | |
|--------------|------------------------|---|---|--|--|
| Contract 1 | 10 March 2022 | Max Team 12, Lantau Pioneer 06No deficiency was observed. | • Nil | | |
| | 17 March 2022 | Lantau Pioneer 01, Yiu Chuen 138No deficiency was observed. | • Nil | | |
| | 24 March 2022 | Area ENo deficiency was observed. | • Nil | | |
| | 31 March 2022 | Berth 5 • Discoloured NRMM labels were observed. | Berth 5 The Contractor was reminded to affix appropriate NRMM labels in accordance with the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation. | | |
| Contract 2 | 2 March 2022 | Portion 3 The health condition of the transplanted plant species of conservation importance was poor (RT-07 and RT-08). Labels were not observed on | pruning/weeding) when necessary keep close monitoring of the plants in terms of their health condition and report to relevant parties in the event of deterioration immediately The Contractor was reminded to | | |
| | | chemical containers. | affix appropriate labels on chemica containers | | |
| | 9 March 2022 | Portion 3Drainage blockage was observed. | Portion 3 The Contractor was reminded to keep the drainage clear and provid proper drainage arrangement to prevent discharge/runoff. | | |
| | | • The health condition of the transplanted plant species of conservation importance was poor (RT-07 and RT-08). | The Contractor was reminded to provide mitigation measures (i.e. daily watering, use of mulch and pruning/weeding) when necessary keep close monitoring of the plants in terms of their health condition and report to relevant parties in the event of deterioration immediately | | |

(1) Site inspection on 3 March 2022 for Contract 1 was cancelled due to COVID-19 pandemic.

(2) Site inspection on 4 March 2022 for Contract 3 was cancelled due to COVID-19 pandemic.

| Contract No. | Inspection Date | Environmental Observations | Recommendations/ Remarks | | |
|--------------|-----------------|---|--|--|--|
| | 16 March2022 | Portion 3 The health condition of the transplanted plant species of conservation importance was poor (RT07 and RT-08). Debris was observed in drainage. | Portion 3 The Contractor was reminded to provide mitigation measures (i.e. daily watering, use of mulch and pruning/weeding) when necessary, keep close monitoring of the plants in terms of their health condition and report to relevant parties in the event of deterioration immediately. The Contractor was reminded to | | |
| | | | keep the drainage clear and provide mitigation measures for waste water. | | |
| | 23 March 2022 | Portion 3 | Portion 3 | | |
| | | The health condition of the transplanted plant species of conservation importance was poor (RT-07 and RT-08). Runoff was observed. | • The Contractor was reminded to provide mitigation measures (i.e. daily watering, use of mulch and pruning/weeding) when necessary, keep close monitoring of the plants in terms of their health condition and report to relevant parties in the | | |
| | | | event of deterioration immediately. The Contractor was urge to implement mitigation measures to prevent polluted site runoff from discharging into near drainage system / waterbodies, critically review the drainage system and identify the source and end/ collection point of the discharge | | |
| | 30 March 2022 | Portion 3 | Portion 3 | | |
| | | • The health condition of the transplanted plant species of conservation importance was poor (RT-07 and RT-08). | • The Contractor was reminded to provide mitigation measures (i.e. daily watering, use of mulch and pruning/weeding) when necessary, keep close monitoring of the plants in terms of their health condition | | |
| | | | and report to relevant parties in the event of deterioration immediately. | | |
| | | HDD | HDD | | |
| | | • Environmental permit was not observed on the gate. | The Contractor was reminded to affix environmental permit on the gate. | | |
| | | Construction materials were observed placing nearby the retained trees and no tree protection was observed. | • The Contractor was urged to remove the materials and provide tree protection. | | |
| Contract 3 | 11 March 2022 | WA6, WA9 | WA6, WA9 | | |
| | | General refuse was observed on ground. | • The Contractor was reminded to clear the general refuse regularly. | | |
| | 16 March 2022 | Portion 104, WA6, WA9, CUT1No deficiency was observed. | • Nil. | | |
| | 25 March 2022 | WA6, WA9 | WA6, WA9 | | |
| | - | Retained water was observed in drip tray. | • The Contractor was reminded to remove the water in drip tray. | | |
| Contract 7 | 1 March 2022 | WA4, Portion 32 No deficiency was observed. | • Nil. | | |

| Contract No. | Inspection Date | Environmental Observations | Recommendations/ Remarks | | | |
|--------------|-----------------|---|--------------------------------------|--|--|--|
| | 8 March 2022 | Portion 37 | Portion 32 | | | |
| | | • Accumulated refuse was observed | • The Contractor was reminded to | | | |
| | | at site. | dispose of general refuse regularly. | | | |
| | 15, 22 and 29 | Portion 32, 37 | • Nil. | | | |
| | March 2022 | No deficiency was observed. | | | | |

The Contractors have rectified all of the observations identified during environmental site inspections in the reporting period. The Contractors were reminded to implement all relevant mitigation measures related to construction dust, construction noise, water quality and waste management outlined in the EIA Report and Updated EM&A Manual.

2.7 WASTE MANAGEMENT STATUS

The Contractors of Contract 1, 2, 3 and 7 have registered as chemical waste producer. Sufficient numbers of receptacles were available for general refuse collection and sorting.

All dump trucks engaged on site was equipped with RTTM system during the reporting period. The Surveillance Team of the ET conducted regular site inspection on the dump trucks and their track records. No illegal dumping and landfilling of C&D materials was found during the reporting period.

Wastes generated during this reporting period include mainly non-inert construction wastes. Reference has been made to the waste flow tables prepared by the Contractors. The quantities of different types of wastes and imported fill materials are summarised in *Table 2.11*.

| Table 2.11 | Quantities of Different Waste Generated and Imported Fill Materials |

Notes:

(a) Inert construction wastes include hard rock and large broken concrete, and materials disposed as public fill.

(b) Imported materials include of sand fill from any source outside of TCNTE.

(c) Imported sorted public fill include all G200, G400 and glass gullet (local recycling materials) from any source outside of TCNTE.

(d) Reuse of inert construction waste generated under the TCNTE contracts.

(e) Non-inert construction wastes include general refuse disposed at landfill.

(f) Recyclable materials include metals, paper, cardboard, plastics and others.

(g) 3,550,090kg of steel was recycled from dismantlement of berth.

2.8 IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURES

A summary of the Environmental Mitigation Implementation Schedule is presented in *Annex B*. The necessary mitigation measures were implemented properly for the Project.

2.9 SUMMARY OF EXCEEDANCES OF THE ENVIRONMENTAL QUALITY PERFORMANCE LIMIT

The monitoring results for air quality monitoring (1-hour TSP) and construction noise monitoring complied with the Action/ Limit levels in the reporting period.

No Action and Limit level exceedance was recorded for water quality impact monitoring in the reporting period.

Cumulative statistics on exceedances is provided in Annex I.

2.10 SUMMARY OF COMPLAINTS, NOTIFICATION OF SUMMONS AND SUCCESSFUL PROSECUTIONS

There was no notification of summons or prosecution recorded in the reporting period.

Three (3) environmental complaints related to Contract 3 were received in the reporting period. Investigations were conducted for the environmental complaints in accordance with the complaint handling process as stated in the

Complaint Management Plan. Environmental complaints in the reporting period are summarized below.

| | Complaint(s) | Investigation/Follow up action(s) |
|---|---|--|
| 1 | Environmental complaint related to Contract 3 regarding noise nuisance generated from an industrial generator on 7 March 2022 was referred by EPD on 10 March 2022. | Based on photo provided by the complainant, the noise mentioned was likely generated by sheetpile installation and PM office construction at Portion WA6 & WA9. According to the work record provided by the Contractor and investigation conducted by ET, no loud noise from generator at the concerned area was encountered and QPME generator was being used. In order to address the noise issue mentioned, Contractor have implemented mitigation measures including erected noise barrier and acoustic mat covering sheet piling hammers and generators. With reference to data from weekly noise monitoring, no project related exceedance was recorded. |
| 2 | Environmental complaint related to Contract 3 regarding air and noise on 18 March 2023 was referred by EPD on 23 March 2022. | Based on the complaint and supplement provided by EPD, the concerned area was solely used as entrance/exit for the construction site. In order to reduce air impact, Contractor have provided additional workers at wheel washing facilities, patrol team for inspecting the road condition and mechanical covers of all dump trucks with loading. In order to reduce the noise impact, Contractor have implemented mitigation measures including vehicle speed limit and prohibited unnecessary honking. |
| 3 | Environmental complaint related to Contract 3 regarding dust/mud and debris along Ying Hei Road was referred by EPD on 31 March 2022. | Based on daily inspection conducted by ET, wheel washing facilities were provided before vehicles exit from the entrance/exit located near Ying Hei Road. In order to prevent mud/debris from falling onto the public roads, Contractor have provided additional workers at wheel washing facilities, patrol team for inspecting the road condition, mechanical covers of all dump trucks with loading and installed CCTV at site exit. |

Statistics on complaints, notifications of summons, successful prosecutions are summarised in *Annex I*.

3 FUTURE KEY ISSUES

3.1 CONSTRUCTION PROGRAMME FOR THE COMING MONTH

Works to be undertaken in the next monitoring period of April 2022 are summarized in *Table 3.1* below, together with the key issues and the key mitigation measures:

| Activities | Key Issues | Key Mitigation Measures |
|---|--|---|
| | ng Chung New Town Extension | - Reclamation and Advance |
| Works (Contract 1) Land-based Works | | |
| Ground investigation works Land DCM works Jet grouting works Placing of sorted public fill Box culvert construction Installation of PVD | Dust emission Handling and storage of C&D materials generated from construction activities Noise from plant operation Emission of dark smoke from PMEs Efficiency of wastewater and drainage management | Good site practices Regular water spraying on stockpiles, unpaved haul road and land filling area Provide tarpaulin sheets coverage on stockpiles Sorting and reuse of C&I materials as far as practicable Use of QPME and noise barrier/acoustic mat Regular maintenance of PMEs Implementation of wastewater and drainage management |
| Marine-based Works Laying of geotextile for seawall construction Marine-based instruments monitoring works Placing of sorted public fill Seawall construction | Elevation in impact on Water Quality due to marine filling works Potential surface runoff Potential filling material drop from barges Disturbance to Chinese White Dolphin Noise from marine vessels and plant operation during normal working hours or restricted hours Dust emission during storage and transfer of sand/ sorted public fill Emission of dark smoke from marine vessel | Provision of perimeter sicurtain Provision of a leading seawall of at least 200m before marine filling works Regular cleaning of accumulated sand/fill materials at the edge of the barges Implementation of Dolphin Watching for the marine-based works Strictly follow requirement under CNP for the use of PMEs and works within restricted period Use of acoustic mat and other noise mitigation measures when necessar Regular maintenance of engines and mechanical |

The ET will keep track on the construction works to confirm compliance of environmental requirements and the proper implementation of all necessary mitigation measures. The ET will also recommend to the Contractors about the environmental toolbox topics on the abovementioned key issues for the next reporting period.

3.2 MONITORING SCHEDULE FOR THE COMING MONTH

The tentative schedules for environmental monitoring in April 2022 are provided in *Annex J*.

4 CONCLUSION AND RECOMMENDATION

This EM&A Report presents the findings of the EM&A activities undertaken for the TCE Project during the period from 1 to 31 March 2022 in accordance with the Updated EM&A Manual and the requirements of the Environmental Permit (*EP-519/2016*).

Air quality (1-hour TSP), noise, water quality (DO, turbidity and SS), monitoring of the *in-situ* preserved plant species of conservation importance and monitoring of the transplanted plant species of conservation importance were carried out in the reporting period.

The monitoring results for air quality monitoring (1-hour TSP) and water quality impact monitoring complied with the Action/ Limit levels in the reporting period.

No exceedance of Limit Levels was recorded for construction noise monitoring in the reporting period. However, two (2) Action Levels were triggered from two (2) environmental complaints related to noise nuisance in the reporting period.

No impact soft shore ecological monitoring at Tung Chung Bay and Tai Ho Wan was scheduled during the reporting period. The impact soft shore ecological monitoring at Tung Chung Bay and Tai Ho Wan was postponed to April 2022 due to COVID-19 pandemic.

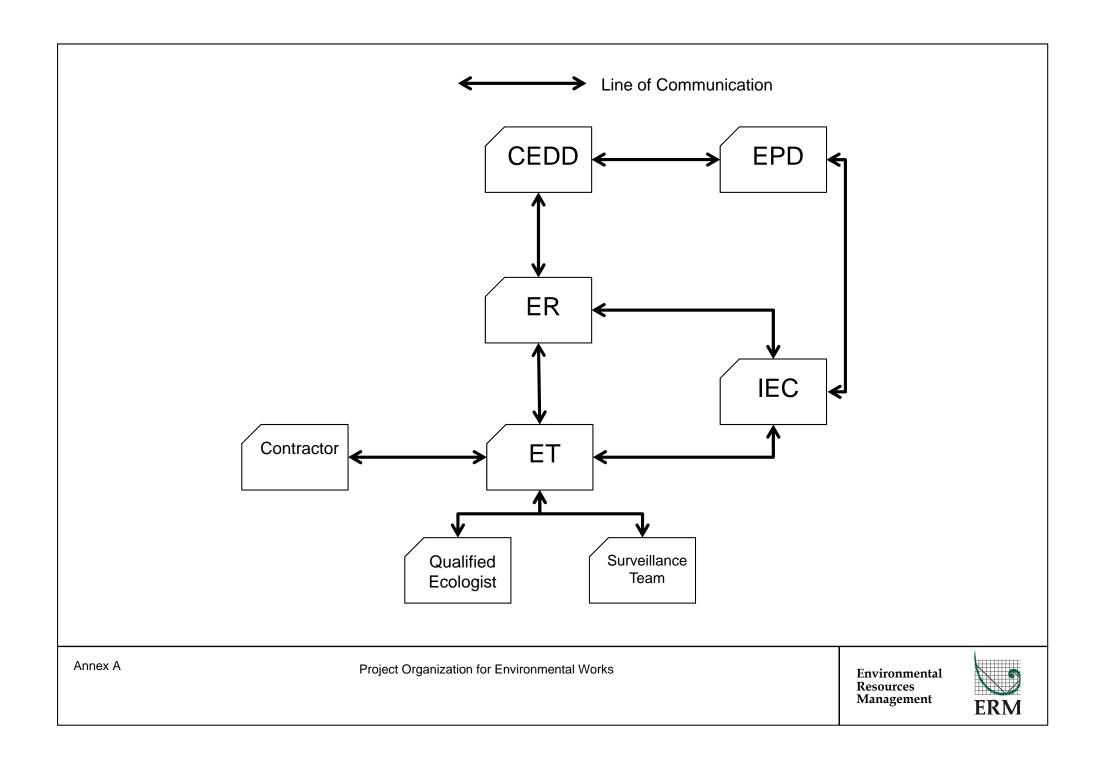

Monitoring of the *in-situ* preserved plant species of conservation importance and monitoring of the transplanted plant species of conservation importance were carried out in the reporting period. Recommendations were given to the Contractors for the deficiencies identified during the inspections.

Environmental site inspections were carried out during the reporting period. Recommendations on remedial actions were given to the Contractors for the deficiencies identified during the site inspections.

There were no notification of summons or prosecution recorded in the reporting period. Three (3) environmental complaints related to Contract 3 were received in the reporting period. Investigations were conducted for the environmental complaints in accordance with the complaint handling process as stated in the Complaint Management Plan.

The ET will keep track on the construction works to confirm compliance of environmental requirements and the proper implementation of all necessary mitigation measures. Annex A

Project Organisation

Annex B

Environmental Mitigation Implementation Schedule

Note: Chapters 1 to 2 of the EIA report present the background information of the Project, identified concurrent projects, objectives and scope for various environmental aspects, and description on alternative options and construction description. Chapters 3 to 12 of the EIA report present the EIA findings and mitigation measures are described below with cross-reference to the EIA report. Chapters 13 to 15 describe the environmental monitoring requirements, summary of environmental outcomes and conclusion.

| EIA Ref. | EM&A Log Ref | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concerns to address | Implementation Agent | Location / Timing | Implementation Stage | Requirements and / or standards to be achieved |
|-------------|-----------------|---|--|-------------------------|------------------------------|-------------------------|---|
| Common | Mitigation | Measures (Applicable to ALL Project Components, including D | Ps and Non-DPs) | | | | |
| Construc | tion Dust In | npact | | | | | |
| S3.4.6 | D1 | Water spraying every hour on exposed worksites and haul road. | Minimize dust impact at the nearby sensitive receivers | Contractor | All construction sites | Construction stage | APCO To control the dust impact to meet HKAQO and TM-EIAO criteria |
| S3.4.6 | D2 | The contractor shall follow the procedures and requirements given in the Air Pollution Control (Construction Dust) Regulation | Minimize dust impact at the nearby sensitive receivers | Contractor | All construction sites | Construction stage | APCO To control the dust impact to meet HKAQO and TM-EIAO criteria |
| \$3.4.6 | D3 | The following dust suppression measures should be incorporated to control the dust nuisance throughout the construction phase: Any excavated or stockpile of dusty material should be covered entirely by impervious sheeting or sprayed with water to maintain the entire surface wet and then removed or backfilled or reinstated where practicable within 24 hours of the excavation or unloading; Any dusty materials remaining after a stockpile is removed should be wetted with water and cleared from the surface of roads; | Minimize dust impact at the nearby sensitive receivers | Contractor | All construction sites | Construction stage | APCO To control the dust impact to meet HKAQO and TM-EIAO criteria |

| EIA Ref. | EM&A Log Ref | Recommended Mitigation Measures | ObjectivesoftheRecommendedMeasures&MainConcerns to address | Implementation Agent | Location / Timing | Implementation Stage | Requirements and / or standards to be achieved |
|-------------|-----------------|---|--|-------------------------|----------------------|-------------------------|---|
| | | • A stockpile of dusty material should not be extended beyond the pedestrian barriers, fencing or traffic cones; | | | | | |
| | | • The load of dusty materials on a vehicle leaving a construction site should be covered entirely by impervious sheeting to ensure that the dusty materials do not leak from the vehicle; | | | | | |
| | | • Where practicable, vehicle washing facilities with high pressure water jet should be provided at every discernible or designated vehicle exit point. The area where vehicle washing takes place and the road section between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcores; | | | | | |
| | | • When there are open excavation and reinstatement works, hoarding of not less than 2.4m high should be provided as far as practicable along the site boundary with provision for public crossing. Good site practice shall also be adopted by the Contractor to ensure the conditions of the hoardings are properly maintained throughout the construction period; | | | | | |
| | | • The portion of any road leading only to construction site that is within 30m of a vehicle entrance or exit should be kept clear of dusty materials; | | | | | |
| | | • Surfaces where any pneumatic or power-driven drilling, cutting, polishing or other mechanical breaking operation takes place should be sprayed with water or a dust suppression chemical continuously; | | | | | |
| | | • Any area that involves demolition activities should be sprayed with water or a dust suppression chemical immediately prior to, during and immediately after the activities so as to maintain the entire surface wet; | | | | | |
| | | • Where a scaffolding is erected around the perimeter of a building under construction, effective dust screens, | | | | | |

| EIA Ref. | EM&A Log Ref | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concerns to address | Implementation Agent | Location / Timing | Implementation Stage | Requirements and / or standards to be achieved |
|-------------|-----------------|--|--|-------------------------|--|-------------------------|---|
| | | sheeting or netting should be provided to enclose the scaffolding from the ground floor level of the building, or a canopy should be provided from the first floor level up to the highest level of the scaffolding; | | | | | |
| | | • Any skip hoist for material transport should be totally enclosed by impervious sheeting; | | | | | |
| | | • Every stock of more than 20 bags of cement or dry pulverised fuel ash (PFA) should be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides; | | | | | |
| | | • Cement or dry PFA delivered in bulk should be stored in a closed silo fitted with an audible high level alarm which is interlocked with the material filling line and no overfilling is allowed; | | | | | |
| | | • Loading, unloading, transfer, handling or storage of bulk cement or dry PFA should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system; and | | | | | |
| | | • Exposed earth should be properly treated by compaction, turfing, hydroseeding, vegetation planting or sealing with latex, vinyl, bitumen, shortcrete or other suitable surface stabiliser within six months after the last construction activity on the construction site or part of the construction site where the exposed earth lies. | | | | | |
| \$3.4.6 | D4 | Implement regular dust monitoring under EM&A programme during the construction stage. | Monitoring of dust impact | Contractor | Selected dust monitoring stations | Construction stage | • TM-EIAO |

| EIA Ref. | EM&A Log Ref | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concerns to address | Implementation Agent | Location / Timing | Implementation Stage | Requirements and / or standards to be achieved |
|-------------|-----------------|---|--|-------------------------|---|-------------------------|---|
| Construc | tion Noise | | | | | | |
| S4.3.4 | N1 | Implement the following good site management practices: only well-maintained plant should be operated on-site and plant should be serviced regularly during the construction programme; machines and plant (such as trucks, cranes) that may be in intermittent use should be shut down between work periods or should be throttled down to a minimum; plant known to emit noise strongly in one direction, where possible, be orientated so that the noise is directed away from nearby NSRs; silencers or mufflers on construction equipment should be properly fitted and maintained during the construction works; mobile plant should be sited as far away from NSRs as possible and practicable; material stockpiles, site office and other structures should be effectively utilised, where practicable, to screen noise from on-site construction activities. | Control construction airborne noise | Contractor | All construction sites where practicable | Construction stage | • Annex 5, TM- EIAO |
| S4.3.4 | N2 | Use of quiet plant which should be made reference to the Powered Mechanical Equipment (PME) listed in the Technical Memorandum or the Quality Powered Mechanical Equipment (QPME) / other commonly used PME listed in Environmental Protection Department (EPD) web pages as far as possible which includes the Sound Power Level (SWLs) for specific quiet PME. | Reduce the noise levels of plant items | Contractor | All construction sites where practicable | Construction stage | • Annex 5, TM- EIAO |
| S4.3.4 | N3 | Install movable temporary noise barriers (typical design is wooden framed barrier with a small-cantilevered upper portion of superficial density no less than 7kg/m^2 on a skid | items to be used at all | | All construction sites where | Construction stage | • Annex 5, TM- EIAO |

| | | based on the guidelines in Appendix A1 of ProPECC PN 1/94. The detailed design of the sand/silt traps should be undertaken by the contractor prior to the commencement of construction; | | | | | |
| | | • Construction works should be programmed to minimize surface excavation works during the rainy seasons (April to September). All exposed earth areas should be completed and vegetated as soon as possible after earthworks have been completed. If excavation of soil cannot be avoided during the rainy season, or at any time of year when rainstorms are likely, exposed slope surfaces should be covered by tarpaulin or other means; | | | | | |
| | | • All drainage facilities and erosion and sediment control structures should be regularly inspected and maintained to ensure proper and efficient operation at all times and particularly following rainstorms. Deposited silt and grit should be removed regularly and disposed of by spreading evenly over stable, vegetated areas; | | | | | |
| | | • If the excavation of trenches in wet periods is necessary, it should be dug and backfilled in short sections wherever practicable. Water pumped out from trenches or foundation excavations should be discharged into storm drains via silt removal facilities; | | | | | |
| | | • All open stockpiles of construction materials (for example, aggregates, sand and fill material) should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system; | | | | | |
| | | • Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris being washed into the drainage system and storm runoff being | | | | | |

| | | directed into foul sewers; | | | | | |
| | | • Precautions to be taken at any time of year when rainstorms are likely, actions to be taken when a rainstorm is imminent or forecasted, and actions to be taken during or after rainstorms are summarized in Appendix A2 of ProPECC PN 1/94. Particular attention should be paid to the control of silty surface runoff during storm events; | | | | | |
| | | All vehicles and plant should be cleaned before leaving a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. An adequately designed and sited wheel washing facilities should be provided at every construction site exit where practicable. Wash-water should have sand and silt settled out and removed at least on a weekly basis to ensure the continued efficiency of the process. The section of access road leading to, and exiting from, the wheel-wash bay to the public road should be paved with sufficient backfall toward the wheel-wash bay to prevent vehicle tracking of soil and silty water to public roads and drains; | | | | | |
| | | • Oil interceptors should be provided in the drainage system downstream of any oil/fuel pollution sources. The oil interceptors should be emptied and cleaned regularly to prevent the release of oil and grease into the storm water drainage system after accidental spillage. A bypass should be provided for the oil interceptors to prevent flushing during heavy rain; | | | | | |
| | | • Construction solid waste, debris and rubbish on site should be collected, handled and disposed of properly to avoid water quality impacts; | | | | | |
| | | • All fuel tanks and storage areas should be provided with locks and sited on sealed areas, within bunds of a capacity equal to 110% of the storage capacity of the largest tank to prevent spilled fuel oils from reaching water sensitive | | | | | |

|-------------|-----------------|---|--|-------------------------|--|-------------------------|---|
| | | On-site sorting of C&D materials | | | | | |
| | | Reuse of C&D materials Use of Standard Formwork and Planning of Construction Materials purchasing | | | | | |
| S7.4.1 | WM6 | <u>Provision of Wheel Wash Facilities</u> Wheel wash facilities have to be provided at the site entrance before the trucks leaving the works area. Dust disturbance due to the trucks transportation to the public road network could be minimized by such arrangement. | Minimize waste impacts from trucks transportation | Contractor | All construction sites | Construction Stage | N/A |
| S7.4.1 | WM7 | Excavated Contaminated Soil As a precaution, it is recommended that standard good site practice should be implemented during the construction phase to minimize any potential exposure to contaminated soils or groundwater. | Remediate contaminated soil | Contractor | All construction sites where applicable | Construction stage | • Practice Guide for Investigation and Remediation of Contaminated Land |
| S7.4.1 | WM8 | <u>Excavated Marine Sediments</u> Reference has been made to the sediment testing results. Possible mitigation measures to handle the contaminated/ uncontaminated sediment are summarized as follows. All construction plant and equipment shall be designed and maintained to minimise the risk of silt, sediments, contaminants or other pollutants being released into the water column or deposited in the locations other than designated location. All vessels shall be sized such that adequate draft is maintained between vessels and the sea bed at all states of the tide to ensure that undue turbidity is not generated by turbulence from vessel movement or propeller wash. Adequate freeboard shall be maintained on barges to | Handle excavated sediment | Contractor | All construction sites where applicable | Construction stage | • ETWB-TCW 34/2002 |

|-------------|-----------------|---|--|-------------------------|--|-------------------------|---|
| | | ensure that decks are not washed by wave action. | | | | | |
| S7.4.1 | WM9 | Dumping of excavated sediment Keep and produce logs and other records to demonstrate compliance and ensure journeys are consistent with designated locations Comply with the conditions in the dumping permit. All bottom dumping vessels (hopper barges) shall be fitted with tight fittings seals to their bottom openings to prevent leakage of material. The excavated sediment shall be placed into the disposal pit by bottom dumping. Contaminated marine mud shall be transported by split barge of not less than 750m³ capacity and capable of rapid opening and discharge at the disposal site. Discharge shall be undertaken rapidly and the hoppers shall be closed immediately. Sediment adhering to the sides of the hopper shall not be washed out of the hopper and the hopper shall remain closed until the barge returns to the disposal site. For Type 3 special disposal treatment, sealing of contaminant with geosynthetic containment before dropping into designated mud pit. A geosynthetic containment method is a method whereby the sediments are sealed in geosynthetic containres and, the containers would be dropped into the designated contaminated mud pit where they would be covered by further mud disposal and later by the mud pit capping at the disposal site, thereby fulfilling the requirements for fully confined mud disposal. | Handle excavated sediment | Contractor | All construction sites where applicable | Construction stage | • ETWB-TCW 34/2002 |
| S7.4.1 | WM10 | Chemical Waste | Control the chemical waste and ensure proper | Contractor | All construction | Construction stage | • Waste Disposal |

| EIA Ref. | EM&A Log Ref | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concerns to address | Implementation Agent | Location / Timing | Implementation Stage | Requirements and / or standards to be achieved |
|-------------|-----------------|--|---|-------------------------|--|-------------------------|--|
| | | If chemical wastes are produced at the construction site, the Contractors should register with EPD as chemical waste producer. Chemical wastes should be stored in appropriate containers and collected by a licensed chemical waste collector. Chemical wastes (e.g. spent lubricant oil) should be recycled at an appropriate facility as far as possible, while the chemical waste that cannot be recycled should be disposed of at either the Chemical Waste Treatment Centre, or another licensed facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation. | storage, handling and disposal. | | sites | | (Chemical Waste) General) Regulation Code of Practice on the Packaging, Labelling and Storage of Chemical Waste |
| S7.4.1 | WM11 | <u>General Refuse</u> General refuse should be stored in enclosed bins separately from construction and chemical wastes. Recycling bins should also be placed to encourage recycling. Preferably enclosed and covered areas should be provided for general refuse collection and routine cleaning for these areas should also be implemented to keep areas clean. A reputable waste collector should be employed to remove general refuse on a daily basis. | Minimize production of the general refuse and avoid odour, pest and litter impacts | | All construction sites | Construction stage | • Waste Disposal Ordinance |
| S7.4.1 | WM12 | <u>Floating Refuse accumulated along the seawall</u> The floating refuse along seawall should be collected to avoid accumulation. In addition, proper seawall design should be employed, and regular checking and cleaning of floating refuse should be implemented. | Control floating refuse and ensure proper disposal | Contractor | Construction sites along seawall | Construction stage | • Waste Disposal Ordinance |

| | | for benefiting both terrestrial and aquatic species along the foreshore, these measures can help to enhance the ecological functions and 'natural-look' of the shoreline, and the potential impacts will be mitigated. | | | | | |
| Landscap | e and Visua | l (Operational Phase) | | | | | |
| S11.7 MM10 | LV10 | Compensatory Planting – Compensatory planting for felled trees shall be provided to the satisfaction of relevant Government departments. Required numbers and locations of compensatory trees shall be determined and agreed separately with Government during the Tree Removal Application process under DEVB TCW No. 10/2013 and LAO PN 7/2007. The location of compensatory planting is proposed at the potential open areas such as open spaces, amenity areas, open areas of the streetscapes including roadside planting, as well as the open areas within development lots. The species to be planted should be all native species, taken "Characteristics of Major Local Tree Species Propagated by AFCD" as a reference. A search of species to be planted will be conducted in a further detailed stage. | Compensate for trees and shrubs lost due to the Project | Relevant Government Departments / Private Sector | Onsite where possible, particular-ly for TCW area | Prior to Construction, Construction Phase & Maintenance in Operation Phase | DEVB TC(W) No.10/2013 and LAO PN 7/2007. GLTM of the Development Bureau, Guidelines on Tree Preservation during Development (April, 2015) |
| S11.7 MM11 | LV11 | Woodland Restoration – A search of area to mitigate the loss of woodland has been conducted. Priority has been given to the practicability of compensation of woodland within the boundary of RODP. Given the nature of the project is to provide development opportunities to satisfy the needs for the society in general and the aspirations of local communities, compensation of woodland is only possible for the areas beyond the RODP. It is considered that the areas adjoining the woodlands near the existing services reservoirs, and hillsides to the east of Tung Chung Road, would be suitable locations. The advantage of these locations is that there are existing woodlands immediately | Reprovide areas of woodland to compensate for those areas of quality woodland lost | CEDD /AFCD | In areas identified and as agreed with AFCD | Prior to Construction, Construction Phase & Maintenance in Operation Phase | DEVB Technical Circular Works 10/2013- Tree Preservation GLTM of the Development Bureau, Guidelines on Tree Preservation |

| EIA Ref. | EM&A Log Ref | Recommended Mitigation Measures | Objectives of the Recommended Measures & Main Concerns to address | Implementati on Agent | Location | Implementation Stage | Requirements and / or standards to be achieved |
|---------------|-----------------|--|---|---------------------------------------|--|--|--|
| | | downhill to the location and the Sheung Ling Pei Fung Shui Wood is further downhill behind Sheung Ling Pei Village, planting new woodland areas adjoining existing woodlands would form an ecological linkage and increase the overall habitat size, and hence would help to enhance the ecological and landscape values in the long run. | | | | | during Development (April, 2015) |
| | | It is noted that the compensation trees for landscape impacts will also be planted near the future service reservoirs. The tree species to be planted should be all native species for woodland compensation, and the two areas uphill to Sheung Ling Pei should also make reference to the existing tree species reported in Fung Shui Woods habitat. | | | | | |
| S11.7 MM12 | LV12 | Screen Planting – Tall screen/buffer trees and shrubs should be planted to screen proposed structures such as roads and buildings. This measure will form part of the compensatory planting and will improve compatibility with the surrounding environment and create a pleasant pedestrian environment. | To screen proposed structures Improve compatibility with the surrounding environment | Relevant Government Departments | Through-out the working sites of the TCW and TCE areas | Prior to Construction, Construction Phase & Maintenance in Operation Phase | • HyD HQ/GN/15– Guidelines for Greening Works along Highways. |
| S11.7 MM13 | LV13 | Roadside Planting – Roadside greening is proposed alongside all roads within the possible developments. It will enhance local identity, if theme planting is used, and reduce visual impact through screening. At-grade road planting should be considered along central dividers and on road islands e.g. in the middle of roundabouts. | Soften the hard, straight edges and provide greening along the roads; Improve the visual amenity | Relevant Government Departments | Along new roads, and On appropriate viaducts | Prior to Construction, Construction Phase & Maintenance in Operation Phase | HyD HQ/GN/15– Guidelines for Greening Works along Highways. |---------------|-----------------|---|--|---------------------------------------|--|--|--|
| S11.7 MM14 | LV14 | Aesthetic Design of Built Development – The planning of the revised RODP has considered reducing potential visual impacts, enhancing visual amenity and keeping visual corridors. The proposed development will ensure the building massing is compatible with its surroundings. To improve visual amenity, natural building materials could be used on building facades. For example, stone and timber should be considered for architectural features; light earthy tone colours such as shades of green, shades of grey, shades of brown and off-white should be considered for the façade treatment to reduce the visibility of the development components. The form, textures, finishes and colours of the proposed development components should aim to be compatible with the existing surroundings. It would only be implemented for public developments/projects. | Improve visual amenity of the new buildings, keep visual corridors and integrate as possible into the surrounding landscape | Relevant Government Departments | Through-out the TCW and TCE areas | Prior to Construction, Maintenance in Operation Phase | Hong Kong Planning Standards and Guidelines (HKPSG) issued by the Planning Department (As at Aug 2011); PNAP APP- 152, Sustainable Building Design Guidelines |
| S11.7 MM15 | LV15 | Maximise Greening on Structures – The Government has been actively promoting greening in buildings and structures such as bridges to improve the environment. This includes actively implementing rooftop greening or vertical greening, as where practicable to enhance the cityscape and mitigate the heat island effect in urban areas. For the new built forms in TCW and TCE, it is considered the implementation of the following greening measures could alleviate the landscape and visual impacts of new development and help the development blend in with its surrounding landscape: Sky Garden: Refuge floors or voids in building mass formed by partial removal of floor plates on certain building storeys provise opportunities for sky gardens for the proposed built development. It can allow views through the development to the background formed by the natural hillsides and | Maximise Greening coverage Enhance visual amenity, create visual corridors and integrate as possible into the surrounding landscape | Relevant Government Departments | On appropriate buildings and structures | Prior to Construction, Construction Phase & Maintenance in Operation Phase | Development Bureau Technical Circular (Works) No. 3/2012 Site Coverage of Greenery for Government Building Projects PNAP APP- 152, Sustainable Building Design Guidelines |

For private development, it is only applicable to sites with inadequate greening coverage and should be implemented in accordance with Sustainable Building Design Guidelines PNAP APP-152. Greening on infrastructure: Planting could be provided on infrastructure such as bridges where appropriate to enhance greenery to soften its built edges. Screen planting could be provided near infrastructure to reduce any undesirable visual impacts. | | | | | |
| S11.7 MM16 | LV16 | Noise barrier design – The visual impact of noise mitigation measures will be mitigated by appropriate detailed design, including suitable combination of transparent and sound absorbent materials, appropriate colour selection of panels and supporting structures, or provision of at-grade planting of trees, shrubs and/or climbers camouflage to the barriers, as well as design of supporting structures to incorporate a high level of quality and aesthetics. A combination of transparent panels at top and solid panels at bottom would lighten the visual impact, and at the same time maintain the attractiveness by using colourful panels. The noise barriers would be implemented for District Distributor Roads and Local Distributor Roads at both TCE and TCW area. | Minimize the visual impact from the structures of noise barriers | HyD | Noise barriers within the TCW and TCE areas | Prior to Construction, Construction Phase & Maintenance in Operation Phase | GLTM of the Development Bureau's Guidelines on Greening of Noise Barriers (April 2012). | CONTACT | : MR K.W. FAN | WORK ORDER HK2117310 |
|---------|---|--|
| CLIENT | : ENVIROTECH SERVICES CO. | |
| ADDRESS | : RM113, 1/F, MY LOFT, 9 HOI WING ROAD, | SUB-BATCH : 1 |
| | TUEN MUN, N.T. HONG KONG | DATE RECEIVED : 29-APR-2021 DATE OF ISSUE : 11-MAY-2021 |
| PROJECT | | NO. OF SAMPLES : 1 CLIENT ORDER |

General Comments

- Sample(s) was/ were submitted by client. Sample(s) arrived laboratory in ambient condition. The result(s) related only to the item(s) tested.
- Sample information (Project name, Sample ID, Sampling date/time, etc.) is provided by client.
- Calibration was subcontracted to and analysed by Action United Enviro Services.

Signatories

This document has been signed by those names that appear on this report and are the authorised signatories

Certificate of Calibration 校正證書

Certificate No. : C213253 證書編號

- 1. The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours before the commencement of the test.
- 2. The results presented are the mean of 3 measurements at each calibration point.

3. Test equipment :

Equipment IDDescriptionCertificate No.CL130Universal CounterC203952CL281Multifunction Acoustic CalibratorAV210017TST150AMeasuring AmplifierC201309

- 4. Test procedure : MA100N.
- 5. Results :
- 5.1 Sound Level Accuracy

| UUT | Measured Value | Mfr's Spec. | Uncertainty of Measured Value |
|---------------|----------------|-------------|-------------------------------|
| Nominal Value | (dB) . | (dB) | (dB) |
| 94 dB, 1 kHz | 93.8 | ± 0.2 | ± 0.2 |
| 114 dB, 1 kHz | 113.8 | | |

5.2 Frequency Accuracy

| UUT Nominal Value | Measured Value | Mfr's | Uncertainty of Measured Value |
|-------------------|----------------|-------------|-------------------------------|
| (kHz) | (kHz) | Spec. | (Hz) |
| 1 | 1.000 | 1 kHz ± 1 % | ± 1 |

Remark : The uncertainties are for a confidence probability of not less than 95 %.

Note :

Only the original copy or the laboratory's certified true copy is valid.

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration is traceable to the National Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

本證書所載校正用之測試器材均可溯源至國際標準。局部複印本證書需先獲本實驗所書面批准。

Sun Creation Engineering Limited

Calibration & Testing Laboratory

Certificate of Calibration 校正證書

Certificate No.: C216702 證書編號

- 1. The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 12 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- 2. Self-calibration using the internal standard (After Adjustment) was performed before the test 6.1.1.2 to 6.3.2.
- 3. The results presented are the mean of 3 measurements at each calibration point.
- 4. Test equipment :

| Equipment ID | Description | Certificate No. |
|--------------|-------------------------------------|-----------------|
| CL280 | 40 MHz Arbitrary Waveform Generator | C210084 |
| CL281 | Multifunction Acoustic Calibrator | AV210017 |

- 5. Test procedure : MA101N.
- 6. Results :
- 6.1 Sound Pressure Level
 - 6.1.1 Reference Sound Pressure Level
 - 6.1.1.1 Before Adjustment

| UUT Setting | | | | Applie | d Value | UUT | IEC 61672 |
|---------------|----------------|------------------------|-------------------|---------------|----------------|-----------------|-----------------------|
| Range (dB) | Function | Frequency Weighting | Time Weighting | Level (dB) | Freq. (kHz) | Reading (dB) | Class 1 Spec. (dB) |
| 30 - 130 | L _A | A | Fast | 94.00 | 1 | * 96.0 | ± 1.1 |

· 6.1.1.2 After Adjustment

| | UUT | Setting | | Applie | d Value | UUT | IEC 61672 |
|---------------|----------------|------------------------|-------------------|---------------|----------------|-----------------|-----------------------|
| Range (dB) | Function | Frequency Weighting | Time Weighting | Level (dB) | Freq. (kHz) | Reading (dB) | Class 1 Spec. (dB) |
| 30 - 130 | L _A | A | Fast | 94.00 | 1 | 94.0 | ± 1.1 |

6.1.2 Linearity

| UUT Setting | | | Applie | d Value | UUT | |
|---------------|----------|------------------------|-------------------|-----------------|----------------|----------------------|
| Range (dB) | Function | Frequency Weighting | Time Weighting | Level (dB) | Freq. (kHz) | Reading (dB) |
| 30 - 130 | L_A | A | Fast | 94.00 104.00 | • 1 | 94.0 (Ref.) 104.1 |
| | | | | 114.00 | | 114.1 |

IEC 61672 Class 1 Spec. : \pm 0.6 dB per 10 dB step and \pm 1.1 dB for overall different.

本證書所載校正用之測試器材均可溯源至國際標準。局部複印本證書需先獲本實驗所書面批准。

The test equipment used for calibration is traceable to the National Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

Calibration & Testing Laboratory

Certificate of Calibration 校正證書

Certificate No. : C216702 證書編號

Remarks : - UUT Microphone Model No. : UC-59 & S/N : 13748

- Mfr's Spec. : IEC 61672 Class 1

- Uncertainties of Applied Value :

| d Value : | 94 dB : 63 Hz - 125 Hz | : ± 0.35 dB |
|-----------|------------------------|------------------------------------|
| | 250 Hz - 500 Hz | $:\pm 0.30 \text{ dB}$ |
| | 1 kHz | : ± 0.20 dB |
| | 2 kHz - 4 kHz | : ± 0.35 dB |
| | 8 kHz | $\pm 0.45 \text{ dB}$ |
| | 12.5 kHz | $:\pm 0.70 \text{ dB}$ |
| | 104 dB : 1 kHz | $\pm 0.10 \text{ dB}$ (Ref. 94 dB) |
| | 114 dB : 1 kHz | $\pm 0.10 \text{ dB}$ (Ref. 94 dB) |
| | | • |

- The uncertainties are for a confidence probability of not less than 95 %.

Note :

Only the original copy or the laboratory's certified true copy is valid.

The values given in this Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environment changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Sun Creation Engineering Limited shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration is traceable to the National Standards as specified in this certificate. This certificate shall not be reproduced except in full, without the prior written approval of this laboratory.

Hours (0700-1900 hours)

Figure F3.2 Graphical Presentation for Noise Monitoring at Station NMS-CA-4

Annex F4

Event and Action Plan for Noise

| Event | Action | | | | | | | |
|-------------------------|--|--|---|--|--|--|--|--|
| Event | ET | IEC | ER | Contractor | | | | |
| Action Level Exceedance | Notify IEC, ER and Contractor; Carry out investigation; | 1. Review the analysed results submitted by the ET; | 1. Confirm receipt of notification of failure in writing; | 1. Submit noise mitigation proposals to IEC and ER; | | | | |
| | Report the results of investigation to the IEC, ER and Contractor; Discuss with the Contractor and formulate remedial measures; Increase monitoring frequency to check mitigation effectiveness. | Review the proposed remedial measures by the Contractor and advise the ER accordingly; Supervise the implementation of remedial measures. | Notify Contractor; Require Contractor to propose remedial measures for the analysed noise problem; Ensure remedial measures are properly implemented | 2. Implement noise mitigation proposals. | | | | |
| Limit Level Exceedance | Identify source; Inform IEC, ER, EPD and Contractor; Repeat measurements to confirm findings; Increase monitoring frequency; Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented; Inform IEC, ER and EPD the causes and actions taken for the exceedances; Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; If exceedance stops, cease additional monitoring. | Discuss amongst ER, ET, and Contractor on the potential remedial actions; Review Contractors remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; Supervise the implementation of remedial measures. | Confirm receipt of notification of failure in writing; Notify Contractor; Require Contractor to propose remedial measures for the analysed noise problem; Ensure remedial measures properly implemented; If exceedance continues, consider what portion of the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated. | Take immediate action to avoid further exceedance; Submit proposals for remedial actions to IEC within 3 working days of notification; Implement the agreed proposals; Resubmit proposals if problem still not under control; Stop the relevant portion of works as determined by the ER until the exceedance is abated. | | | | |

REPORT OF EQUIPMENT PERFORMANCE CHECK/ CALIBRATION

Test Report No. Date of Issue Page No.

: R-BB030068 : 21 March 2022 : 1 of 2

PART A - CUSTOMER INFORMATION

Enovative Environmental Service Ltd. Flat 2207, Yu Fun House Yu Chui Court, Shatin New Territories (HK) Hong Kong Attn :

PART B - SAMPLE INFORMATION

| Name of Equipment : | YSI ProDSS (Multi-Parameters) | | |
|----------------------------|-------------------------------|--|--|
| Manufacturer : | YSI (a xylem brand) | | |
| Serial Number : | S/N: 16H104233 | | |
| Date of Received : | | | |
| Date of Calibration : | 18 March 2022 | | |
| Date of Next Calibration : | 17 June 2022 | | |

PART C - REFERENCE METHODS/ DOCUMENTS FOR THE CALIBRATION

| <u>Test Parameter</u> | Reference Method |
|-----------------------|---|
| Turbidity | APHA 21e 2130B |
| Conductivity | APHA 21e 2510B |
| Dissolved oxygen | APHA 21e 4500 O |
| pH value | APHA 21e 4500 H+ |
| Salinity | APHA 21e 2520B |
| Temperature | Section 6 of international Accreditation New Zealand Technical Guide no. 3 Second edition March |
| | 2008: Working Thermometer Calibration Procedure |

PART D - CALIBRATION RESULT

(1) Turbidity

| EXPECTED READING (NTU) | DISPLAY READING (NTU) | TOLERANCE (%) | RESULT |
|------------------------|-----------------------|---------------|--------------|
| 0 | 0.05 | | Satisfactory |
| 10 | 10.09 | 0.9 | Satisfactory |
| 20 | 19.68 | -1.6 | Satisfactory |
| 100 | 104.79 | 4.79 | Satisfactory |
| 800 | 793.41 | -0.82 | Satisfactory |

Tolerance of Turbidity should be less than \pm 10.0 (%)

(2) Conductivity

| EXPECTED READING (MS/CM AT 25°C) | DISPLAY READING | TOLERANCE (%) | RESULT |
|----------------------------------|-----------------|---------------|--------------|
| 146.9 | 149.71 | 1.91 | Satisfactory |
| 1412 | 1471 | 4.18 | Satisfactory |
| 12890 | 12690 | -1.55 | Satisfactory |

Remark(s)

•The "Date of Next Calibration" is recommended according to best practice principals as practiced by QPT or quoted form relevant international standards. •The results relate only to the calibrated equipment as received

The performance of the equipment stated in this report is checked with independent reference material and results compared against a calibrated secondary source.

"Displayed Reading" denotes the figure shown on item under calibration/ checking regardless of equipment precision or significant figures.

•The "Tolerance Limit" mentioned is the acceptance criteria applicable for similar equipment used by Quality Pro Test-Consult Ltd. or quoted form relevant international standards.

REPORT OF EQUIPMENT PERFORMANCE CHECK/ CALIBRATION

Test Report No. Date of Issue Page No. : R-BB030069 : 21 March 2022 : 1 of 2

PART A - CUSTOMER INFORMATION

Enovative Environmental Service Ltd. Flat 2207, Yu Fun House Yu Chui Court, Shatin New Territories (HK) Hong Kong Attn :

PART B - SAMPLE INFORMATION

| Name of Equipment : | YSI ProDSS (Multi-Parameters) |
|----------------------------|-------------------------------|
| Manufacturer : | YSI (a xylem brand) |
| Serial Number : | S/N: 16H104234 |
| Date of Received : | 18 March 2022 |
| Date of Calibration : | 18 March 2022 |
| Date of Next Calibration : | 17 June 2022 |

PART C - REFERENCE METHODS/ DOCUMENTS FOR THE CALIBRATION

| <u>Test Parameter</u> | Reference Method |
|-----------------------|---|
| Turbidity | APHA 21e 2130B |
| Conductivity | APHA 21e 2510B |
| Dissolved oxygen | APHA 21e 4500 O |
| pH value | APHA 21e 4500 H+ |
| Salinity | APHA 21e 2520B |
| Temperature | Section 6 of international Accreditation New Zealand Technical Guide no. 3 Second edition March |
| | 2008: Working Thermometer Calibration Procedure |

PART D - CALIBRATION RESULT

(1) Turbidity

| EXPECTED READING (NTU) | DISPLAY READING (NTU) | TOLERANCE (%) | RESULT |
|---------------------------------|-------------------------|---------------|--------------|
| 0 | 0.05 | | Satisfactory |
| 10 | 10.20 | 2.0 | Satisfactory |
| 20 | 19.77 | -1.2 | Satisfactory |
| 100 | 104.21 | 4.2 | Satisfactory |
| 800 | 792.60 | -0.9 | Satisfactory |

Tolerance of Turbidity should be less than \pm 10.0 (%)

(2) Conductivity

| EXPECTED READING (MS/CM AT 25°C) | DISPLAY READING | TOLERANCE (%) | RESULT |
|------------------------------------|-----------------|---------------|--------------|
| 146.9 | 152.1 | 3.54 | Satisfactory |
| 1412 | 1472 | 4.25 | Satisfactory |
| 12890 | 12618 | -2.11 | Satisfactory |
| 58670 | 57412 | -2.14 | Satisfactory |
| 111900 | 110616 | -1.15 | Satisfactory |

Tolerance of Conductivity should be less than \pm 10.0 (%)

(3) Dissolved oxygen
